The Self-construal of Students at a Private Higher Learning Institution

The Self-construal of Students at a Private Higher Learning Institution

1. A. Supratiknya --> Faculty of Psychology, Sanata Dharma University

Abstract

The present study aims at exploring the self-construal of students at a private higher learning institution in Yogyakarta with paying attention to their gender and ethnic background, namely Javanese versus non-Javanese (Chinese, Dayakese, Batakese, Sundanese, Balinese, Betawinese, and Florenese). The instrument was Skala Konstrual-diri (n = 18; α = 0.6749), the Indonesian adaptation of the Self-Construal Scale developed by Theodore M. Singelis (1994). A total of 176 sophomores of 9 different ethnic background (131 Javanese and 45 non-Javanese) from 20 study programs in 7 different faculties participated as Subjects. The results led to two major conclusions. First, as members of Eastern collectivistic communities, both Javanese and non-Javanese Subjects in general tend to have an interdependent self-construal, but this tendency is significant only among the Javanese. Second, although there is a tendency for female Subjects in general to have a more interdependent self-construal than male Subjects, but the difference is not significant among both the Javanese and non-Javanese Subjects.

Keyword: individualism; collectivism; independent, self-construal; interdependent, self-construal.
