Abstract

In this instant-information era, the year-2000-and-up students to a certain extent reflects the young Indonesian generation at large. Thus their bio-psycho-socio-spiritual life are assumed to reflect the life of the young Indonesian generation as well, especially concerning sexual problems. This preliminary study reveals the sexual intelligence of the student subjects (N=510: 470 females, 40 males), including whether it could be enhanced through an interactive dialog in a workshop. Data were collected through a pre- and post-test using a questionnaire (Conrad & Milburn, 2003). The data were analysed with the anacova and t-test. Results reveal that the sexual intelligence of the subjects are below the expectations as it should be as candidate intellectuals. A significant result was achieved concerning the interactive dialogue, which could enhance their sexual intelligence, at least cognitively. The dangers of neglecting sexual education are discussed.
