CORRELATIONS BETWEEN HIP ABDUCTOR’S PERFORMANCE WITH HIP BONE MINERAL DENSITY IN ELDERLY WOMEN
(Rwahita Satyawati, Imam Subadi, Damayanti Tenduh Utama, Bayu Santoso)

14.5 kDa PROTEIN OF PLASMODIUM FALCIPARUM IS A SPECIFIC ASEXUAL STAGE ANTIGEN RECOGNIZED BY POOLED OF MOUSE IMMUNE SERA
(Heny Anwati, Kusmainarnawati, Yoes Prijatna Dachlan)

THE EXPRESSION OF MITOCHONDRIAL HEAT SHOCK PROTEIN 10 IN ORAL LESIONS WITH HPV POSITIVE
(Adi Prayitno, Widya Asmara, Ambar Mudigdo, Mandjojo Rukmo, Suhartono Taat Putra)

NOSOCOMIAL INFECTION MONITORING USING URINE CATHETER
(Puspa Wardhani, Djojo Sinwantoro, Prihatini)

PATTERN OF COMMUNITY ROLE DEVELOPMENT AS AN EFFORT TO INCREASE TUBERCULOSIS PATIENTS COVERAGE WITH PASSIVE CASE FINDING
(Alikha, Djojar Nuswantoro)

EFFECTIVENESS OF CIGARETTE BUTTS AS AN ALTERNATIVE MATERIAL FOR FORENSIC DNA IDENTIFICATION WITH POLYMERASE CHAIN REACTION (PCR) IN SHORT TANDEM REPEAT (STR) LOCI
(Ahmad Yudianto)

EFFECT OF FRICTION TECHNIQUE MASSAGE FOR LEG AFTER MAXIMAL EXERCISE ON THE REMOVAL RATE OF BLOOD LACTATE
(Yudik Prasetyo, Elyana STP Ambar)

PHYSIOLOGICAL EFFECTS OF MUSIC DURING EXERCISE SECRETION OF HORMONES CORTISOL AND ENDOPHINS
(Suhartono)

EXPRESSION OF P53 ONCOPROTEIN IN HUMAN BREAST DUCTAL CARCINOMA (IN SITU, INVASIVE AND METASTATIC)
(Imam Susilo)

Nosocomial Infection Monitoring Using Urine Catheter

Abstract

The objective of this research was to study the onset of urinary tract infection in patients using an indwelling catheter and the pattern of bacteria causing nosocomial infection. In-patients using urinary catheter in the neurology, surgery and internal medicine wards of Dr Soetomo Teaching Hospital were studied. Urine catheter samples were obtained by aspiration. Patients with UTI before catheterization and positive cultures at the first catheterization were excluded. Urine cultures were examined on day 3, day 5 and day 7 after catheterization using the BBL Urotube. Of 32 urine catheter samples with negative cultures at the first catheterization, 30 urine catheter samples have been examined. The incidence of hospitalized positive urine culture was 11 of 30 (36.6%) while the true UTI was 5 of 30 (16.7%). Gram positive cocci were 2 of 11 (18.2%), Gram negative bacilli were 7 of 11 (63.6%) and Candida sp were 2 of 11 (18.2%). Microorganism grew initially on day 3, four of 30 (13.3%) and increased on day 5, five of 15 (33.3%) as well on day 7, two of 6 (33.3%). This study concluded that urinary tract infection in patients using urinary catheter initially occurred on day 3. Gram negative bacilli were the most prevalent uropathogens in CAUTI.
