**Abstract**

The purpose of this study is to explore and to describe the spiritual experiences and the dynamics of emotions of the people who convert their beliefs. This research was performed with Empirical Phenomenological Psychological (EPP) analysis. The result shows that the emotions arising from the religion conversion was very typical, for examples are fractal emotion and emotion without thinking. Fractal emotion is the emotion while the subjects only feel the emptiness in his own feelings. Emotion without thinking is the emotion that can be felt, but the subjects don't understand what it is. Beside the emotions, the subject faith converting his belief was based on the truth of hybrid conscience. The hybrid truth is the truth by taking each good thing from every religion, especially their previous religion and current religion. The determinant factor determining the hybrid truth is the conscience.
