Abstract

This research was an experimental research which was aimed to test the effectiveness of potency and entrepreneurship (PPE) training to develop the entrepreneurship skill of Senior High School Students. The participants of this research were 35 students who were the members of 12nd class in Ngawi Region Senior High School, who has personal intention to work and does not continue their bachelor program because of economical reason. There were just 18 of 35 subjects that appropriate to be participant on further analysis, because of their attendance at the whole experiment process in this research. The result shows that p-value t-test statistic score is 0,00 (<0,05). It means there is a significant difference of entrepreneurship skill on Senior High School Students after given the potency and entrepreneurship (PPE) training. It has shown the effectiveness of potency and entrepreneurship training (PPE) to increase the student's entrepreneurship skill.
