Abstract

Self-concept is a part of human life that contain perception, belief and experience that will predict consistency of human behavior so we know who we are. Self-concept which formed from family environment softly changed because of experience, self-competence and self-actualization. The unmarried women usual has feeling unbalanced because of they are not similar with the common woman and that must be influence their self-concept. This research figured self-concept on unmarried women who has a success career but does not married yet. This research has used three women who have 44-52 years old. The result shown that the unmarried women who have success career have better positive self-concept than the common women.
