Anesthesia for Patients with Eclampsia in Dr Soetomo Hospital Surabaya

Abstract

A retrospective analysis of medical records in year 2002 revealed 10 patients with eclampsia underwent C-section under general anesthesia out of 110 patients diagnosed with pre-eclampsia/eclampsia. Seven cases (70%) were patients with first pregnancy and 3 patients with repeated pregnancies. The babies' first minute evaluation found that 40% were vigorous, 20% were in mild asphyxia, and 40% were in severe asphyxia. After 5 minutes resuscitative efforts, the evaluation showed improvement that only 20% were still in mild asphyxia. All parturients survived without sequelae. Six were discharged within 7 days, three before 14 days and only one stayed longer to day 20.
