CDP Choline (Citicoline = Nicholin) Therapy on Some Cases of Children with Organic Brain Syndrome

Abstract

CDP choline (citoline) indicates a clear consciousness recovery, which is followed by a great improvement on EEG scheme, general behavior and the decrease of brain edema. These effects are particularly caused by the reformation of phospholipid metabolism disturbance as a result of brain dysfunction. We will be reporting the results of CDP choline therapy in four syndromes caused by head trauma, brain ischemia, encephalitis and autistic syndrome.
