The relationship between perceptions of parental control with tendency of delinquency behavior in adolescent who were involved in Tawuran

Hubungan Antara Persepsi Terhadap Kontrol Orangtua Dengan Kecenderungan Perilaku Delinkuensi Pada Remaja yang Pernah Terlibat Tawuran

1. Andi Maulida Rahmania --> / maulida.rahmania@gmail.com

Abstract

Tawuran among students in Indonesia are persistent and cause many victims. The aimed of this study is to determine whether there is a negative relationship between perceptions of parental control with tendency of delinquency behavior in adolescent who were involved in Tawuran. The parental controls are referred to in this study is the control of behavior by Barber (1994), while tendencies of delinquency behavior in question is referred to overt delinquency by Loeber.

The study was conducted on 32 teenagers who were involved in Tawuran. The sampling technique used was purposive sampling. Data collection devices are questionnaire, in the form of scale perception of parental control and tendency of delinquency behavior scale developed by the authors. Each scale consists of 23 valid items. The reliability of the perceptions of parental control scale is 0.871 and the realibility of the tendency of delinquency behavior is 0.895. Data analysis was performed with the Pearson Product Moment correlation technique using SPSS 16.0 for windows.

Result of the data analysis show that the correlation (r) between perceptions of parental behavioral control and tendency of delinquency behavior is - 0.729 with significance (p) is 0.000. It showed that there is a negative relationship between perceptions of parental control with tendency of delinquency behavior in adolescent who were involved in Tawuran.
