Abstract

In an article which was recently published in the Journal of the American College of Surgery, entitled "Is surgical Science dead? The Excelsior Society Lecture" wrote by Barker and Kaiser, the surgical science and surgery has an interesting historical pathway. From dedicating the knowledge in surgery ("chirurgia" means "work by hand") since the beginning of mankind and human history to nowadays' need of medicine in the treatment of genetic diseases and gene therapy as well as the treatment of cancer and other malignant diseases. Mechanical trauma still needs treatment by surgery. Surgery and surgical science still exist and not dead. Surgeons, on the other perspective, have more obligations and challenges to face the trend of the new diseases and treatment modalities which might need the knowledge of surgical science.
