Abstract

This study aims to determine the meaning of postnatal life physically disabled after an accident. The research was conducted on three subjects who become physically disabled due to accident up to postnatal amputated and lost one of his limbs roles. The information disclosed by the subject using the method of in-depth interviews as the primary data collection techniques. Data analysis techniques used in this study was a thematic analysis by coding of the transcripts that have been in the verbatim interviews, field notes and some documentation. This study uses the theory of the meaning of life of Victor Frankl. The meaning of life is considered something of value and be objective in humans. The results showed that three subjects found the meaning of life as the same in the face of the mishaps that befall them. Three subjects considered the events that happened was purely an accident that is a work accident for first and second subject, and traffic accident for the third subject. The accidents is considered as a disaster beyond human control of a given trial and learning from Allah SWT. It gave impact on the subject, they are, able to accept the situation with resignation and accept what they get. Subjects are more patient in the act and established a more harmonious relationship with the community and family.
