Abstract

This study aimed to know correlation between coping strategies and quality of life among patients with schizophrenia remission symptoms. Total number of subjects was 20 patients. Sampling technique used was accidental sampling. Criteria of sample in this study are (1) patients who were diagnosed with schizophrenia by psychiatrist, (2) in remission symptoms, determined by low score on each item in BPRS scale. Adaptive coping were examined using coping strategy scale consists of 34 items (coefficient alpha Cronbach is 0.904) created by the author, and schizophrenia's quality of life examined by adaptation of SQLS (Self-report Quality of Life Measure for People with Schizophrenia) consisted of 30 items (coefficient alpha Cronbach is 0.844) created by Diane Wild (2010). Data were analyzed by statistical product moment's Pearson. Results obtained correlation value are 0.757 and significance level are 0.001. This suggests that there is a positive correlation between coping strategies and quality of life in patients with schizophrenia remission symptoms.
