Abstract

This study aims to provide an overview of the quality of life in elderly women who are single. In addition, this study also aims to determine the determinants that affect the quality of life, particularly in elderly women who are single. This study was conducted to two elderly women who have never been married and do not live alone. Data were obtained through interviews with the concerned subject with significant other interviews to obtain additional data. From the results of the study state that is not easy to go through life as a single woman in old age. In general, the two subjects of this study has been able to accept his situation and remain positive thinking in life. Overall quality of life of elderly women associated with self-acceptance, positive mindset associated with the condition of single, well-received social support from family and environment, financial independence and insufficient daily needs.
