Abstract

Nurse is the most health workers in hospital which has the longest risk of contact with patients like bloods, body fluids of patients, and other dangers which can become a medium of transmission of diseases such as HIV/AIDS if the rules of safety are violated. The purpose of this study is to see the nurses on implementation of safety in the handling of HIV/AIDS patients according to the policy of RSUD Dr. Soetomo Surabaya, including how to work safely using Universal Precautions (UP), training, and the Provision of Personal Protective Equipment (PPE). From aspect of data analysis is a descriptive research, in term of time, including cross sectional. The Object of this research about implementation of safety on seven nurses in UPIPI of RSUD Dr. Soetomo Surabaya. Data that has been used were primer data (questionnaires, observation and interviews) and secondary data obtained from hospital. Duration of this study from 3-31 May, 2010. Result showed that the majority had been applied. However there were components that have not been already applied yet, like implementation of UP wash hands first before wearing gloves (14.3%) and the use of protective clothing (16.7%). Some of nurses have not already received training again yet and in the provision of APD, mask inventory and gloves sometimes are not still enough. (FMI 2012;48:32-36)
