Abstract

Medical record is a compilation of documentation that consists of patient identity, evaluation, treatment, procedures and other health service in a health care centre. Resending procedures of medical records to Medical Records Unit at least 2x24 hours after outpatient process. It has to send back on time for many values. The aim of research was to analyze why the medical records were many medical records sent back lately to medical records unit in General Hospital of "X". This was descriptive study with medical records as sample. They were medical records 195 files, taken by random sampling. The results showed that of the 195 files that timely repayment time as many as 57 files or 29%, while late as 138 files or 71%. Factors that led to the delay in returning the medical record were the completeness of medical record completeness, and the complete medical record filing, and compliance of health workers who responsible in filing the medical record. To minimize the incompletness of medical records, improve the ontime target. The medical staffs needs to expose by socialization of medical record.
