Abstract

E-procurement has been implemented by the government of Surabaya is a new leap in the application of information technology in the delivery of government in terms of service to the public. As one part of the form of e-government, e-procurement are required to always be able to provide a service that should be more organized than the previous service with the manual process in the process of auction of goods / services government Government surrounding the city of Surabaya. In addition to providing a better service e-procurement is also expected to become a medium that can create a climate and culture of a clean, transparent and accountable in order to create good governance. Problems that are used in this study is how e-procurement as a form of e-government that has been based on information technology that can be held accountable for an ideal of service as an effort mencitakan formation and good governance in the organization of auctions of goods / services of government. This study to address the above problems using qualitative research methods in descriptive research type with the retrieval of data from in-depth interviews, documentation and observation. As for the decision made by the informant used purposive and snowball techniques that include informants in relevant agencies or partners coming from informants who participated actively in the auction process of procurement of goods / services of government in the city of Surabaya. Conclusions obtained in this study is the e-procurement in its application it has made the service and information about the auction of goods / services easier and faster transparent and accountable. e-procurement can form a cost savings by combining the benefits gained. Besides e-procurement has not been able to establish a good interaction between government, private, and community. E-procurement can also be regarded as a medium of information technology in an effort menjebatani establish good governance. It can be seen through the transparency, accountability, and participation was minimal where the trend of corruption and fraud in the auction process goods / services of government in the city of Surabaya.
