KELAINAN SENDI TEMPOROMANDIBULA AKIBAT RESTORASI GIGI YANG KURANG BAIK

Abstrak :

Temporomandibular joint is a component of stomatognatic system which plays a direct role in the masticatory function. One of some etiology factors causing temporomandibular disorder is occlusal disorder or occlusal disharmony, such as abnormal dental restoration with abnormal intercusps contact. Epidemiologically, it is suggested that individu with a dental restoration has a higher incidens of temporomandibular disfunction than individu without it.
