PENYAKIT NEUROLOGI YANG DISEBABKAN PROSES AUTOIMUN (NEUROIMMUNOLOGICAL DISEASE)

Abstrak:

Neuroimmunology disorders correlated to the autoimmune disease that affect the nervous system had been already explained in previous studies i.e. multiple sclerosis (MS) and acute disseminated encephalomyelitis, Guillain-Barre Syndrome (GBS) and the neuromuscular junction (NMJ) morbidity i.e. myasthenia gravis (MG). Some of these diseases are commonly diagnosed in young adults. Each disease has characteristic, MS characterized by bilateral disorder, including ophtalmoplegia. GBS characterised by ascending simetric paralysis, autonomic dysfunction with fast progressivity. In MG, patients may have symptoms only late in the day after exercise. Here, discussion of each disease will be further detailed.
