(Studi Deskriptif Mengenai Stigmatisasi Kalangan Komunitas Basket Pada Pebasket Lesbian di Kalangan UKM Bola Basket Universitas Kota Surabaya)

Abstrak :

ABSTRACT

This study was motivated by the appearance of lesbianism as a subculture in society, particularly among the basketball community in the city of Surabaya. This phenomenon is deemed contradictory to the dominant culture, a culture with its own values and norms, that has served as a foundation of society. As such, these values and norms stigmatize lesbian basketball players.

This study is used to answer two main questions, the first one being how heterosexual individuals within the basketball community categorize lesbian players; and the second one being how these heterosexuals stigmatize the lesbians who belong to a university basketball team.

The theory used in this study is the one coined by Erving Goffman. This study is a descriptive ethnographical study using qualitative data which were collected by observation, interview and several secondary data that are relevant to this study such as books, the internet and past studies.
Result of this study showed that heterosexual individuals within the basketball community stigmatize lesbian basketball players in four steps. The stigmatization begins with understanding the phenomenon, which is then followed by categorization of those lesbian players. The third step is stigmatization and ends with giving response and showing the appropriate attitudes to lesbianism that occurs around them.
